Iurii Sugrobov

QA Fullstack Engineer · Java / Kotlin / TypeScript / C#

Telegram: @ya_feed | Email: yrik0091@gmail.com | Georgia | Open to relocation | English: B1–B2

QA automation engineer. Have built test automation from scratch multiple times within product teams and developed existing frameworks for UI, API, and database layers. Worked in large teams where mentoring was part of the role, as well as in small teams where I held full ownership of quality. Additional experience includes testing AI products and LLM integrations, as well as building bots on the Primo RPA platform (both commercial and internal projects).

KEY SKILLS

Languages	Java 21+, Kotlin, TypeScript, C#, SQL, Bash
Test Automation	JUnit 4/5, TestNG, Kotest, Selenide, Selenium, Playwright, Rest Assured, Cucumber, WireMock, Faker, Lombok
API & Integrations	REST, SOAP, gRPC, WebSocket, Kafka, Postman, Insomnia, Swagger, DevTools, XPath, JMeter
Databases	PostgreSQL, Oracle, Redis, JDBC, Hibernate, Ktorm, HQL
CI/CD & Infrastructure	Jenkins, GitLab CI, Docker, Kubernetes, Maven, Gradle, Git (GitLab, GitHub, Bitbucket), Linux
Reporting & Logs	Allure, Allure TestOps, Kibana / OpenSearch, SLF4J, Grafana
RPA	Primo RPA (bot development, plugin testing, orchestrator administration), C#, PowerShell / bash
Processes	Jira, Zephyr Scale, Confluence, Scrum, grooming, code review
Testing Types	functional, integration, regression, smoke, E2E; UI / API / DB

WORK EXPERIENCE

Alfa-Bank

August 2024 — Present

QA Engineer (fullstack)

- Built a Java test automation framework from scratch using best design patterns and practices, which reduced regression time by 3x compared to the previous framework.
- Mentor team members and own test automation for the team.
- Covered a wide range of important business scenarios with E2E autotests.
- Develop and maintain API and database-layer autotests in Kotlin and Java, as well as frontend tests in TypeScript / Playwright.
- Verify asynchronous scenarios via Kafka, investigate defects through Kibana logs, and work with services running in Kubernetes.
- Maintain test artifacts and reporting in Allure TestOps; cover business-critical scenarios with tests.
- Participate in Scrum processes: grooming, task estimation, and proposals for product improvements.

Stack: *Kotlin, Java, TypeScript, Playwright, Gradle, Kotest (JUnit 5), Allure, Allure TestOps, Ktorm, Oracle, Redis, Kafka, REST (Rest Assured), SOAP, Kubernetes, Kibana, OpenSearch, Grafana, Jenkins, Bitbucket, Git, SLF4J, Faker, Lombok*

ITFB Group

October 2022 — August 2024

QA Automation Engineer (fullstack)

- Introduced testing into the product from scratch: processes, test artifacts, and a Java-based test automation framework, which improved quality and defect-detection speed.
- Tested a browser extension and the ChatGPT API integration — including prompt engineering, response quality, and structure.

- Developed the UI, API, and database test framework: Page Object Model, Builder and API Client Wrapper patterns, a unified database access layer, and flaky-test stabilization.
- Reduced the manual regression scope by automating key business-critical scenarios.
- Isolated external dependencies using the WireMock mock service.
- Worked with databases via JDBC and Hibernate: wrote SQL queries for data verification and test-state setup.
- Maintained test documentation (test cases, checklists, bug reports) and took part in grooming sessions with business analysts and the client — refining requirements before development began.

Stack: *Java, JUnit 5, Selenide, Rest Assured, Maven, GitLab CI, Hibernate, PostgreSQL, Docker, WireMock, Allure, Jira, Zephyr, Confluence, Cucumber, Chat GPT, LLM*

EDUCATION

Moscow State University of Technology «STANKIN» — Institute of Information Systems and Technologies, Bachelor's degree. Moscow, 2022.

CERTIFICATES

«Test Automation Engineer in Java», Yandex — 2023.
